Cassa 'All in One Fish Attractant' is scientifically formulated for commercial and recreational fishing. The formulation combines Deep-sea Squid Oil, 100% Pure Aniseed Oil and Natural Fish Pheromones.

Deep Sea Squid Oil provides an irresistible aroma and essential natural amino acids, as well as assisting the formulation to trace the scent from the catching area.

Aniseed Oil acts as a masking agent to mask the odors from human touch and plastic lures.

Fish Pheromones are a combination of natural compound molecules fish emit in their exocrine glands, these compounds trigger competitive and aggressive attacks on their prey both individually and as a school.
