

Healthy Pet
Omega™

CALAMARI OMEGA-3 EPA / DHA + ASTAXANTHIN

canine

'when only the best is good enough for the ones you love...'

Healthy Pet Omega™ Canine Formula has been scientifically formulated for optimum health and wellbeing of dogs of all ages and breeds by a proprietary process that creates absolute minimal environmental impact. This proprietary 'world first' formulation is a rich source of **Omega-3, 6 & 9** and contains more **EPA & DHA** than fish oil and krill oil combined and is blended with the powerful antioxidant **Astaxanthin** plus **Vitamins A & E**.

The optimum Health Benefits of **Omega-3 EPA & DHA** for your Pet Nutritionally are Eicosatetraenoic Acid (**EPA**) and Docosahexaenoic Acid (**DHA**).

DHA is highly beneficial for skin and coat as well as nervous system function and is beneficial for young developing infants and adult animals. Also in the prevention of senior animal dementia.

EPA is the anti-inflammatory component of omega oils that is beneficial for your pet's bone maintenance and repair.

ASTAXANTHIN is a powerful antioxidant – antioxidants are an important nutrient to fight against free radical damage. Besides being highly beneficial for joint health, eye function and heart health, astaxanthin is also great for brain function, immune system health and slows the aging process.

- + 100% Natural Product
- + Scientifically Formulated
- + Proprietary 'World First' Formulation
- + Australian Made and Owned
